-React -Angular -git -Express -Next.js -AWS -GraphQL  -SQL -NoSQL

*Experience in:*

-C - R - Ruby - Bash -.Net - Go

## EXPERIENCE

**Designity**
*Emerging Creative*                                                                 *July 2024 - Present*
- Used Figma to develop mobile and web applications
- Used Miro to storyboard and design the flow of applications (how pages connect to each other)
- Worked with clients to understand their needs and improved with feedback

**NBA SideKick (Mobile Application)**
*Sole Developer*                                                              *December 2023 - May 2024*

- An app that allows people to play a side competition while watching NBA games.

- Built off a React Native frontend and AWS Amplify Backend
- Authenticated users via AWS Cognito and stored data via DynamoDb (Queried via GraphQL)
- Web scrapes NBA.com for player statistics (JSON processing)
- Used Figma to engineer and build the look of the app.

**CVS Health**                                                                            *Boston, MA*
*Digital Engineering Accelerator Intern*                                         May 2023 - August 2023

- Worked in a SCRUM based environment with my team to help develop changes on the main website.
- Learned the ins and outs of working in a large corporate setting.
- Worked with Angular and Typescript to debug and help support the main team.

**Building-U**                                                                           *Toronto, CA*
*Junior Laravel Developer*                                                   December 2020 - March 2021
- My role at Building-U was spent on a team developing a CRUD website via Laravel and React.
- We used MySql as a database and collaborated on GitHub and Slack.
- We also had a new team of interns join us in which I helped to lead and integrate into our projects.
